

Hello,

I am Mariam Ekizashvili, a 20-year-old front-end developer with 2 years of experience in this field, specifically in React.js. I create beautiful websites and apps adapted to all devices. All my projects are designed by me.

When creating a website, it is very important for me that the page is as interactive as possible, but light. I pay a lot of attention to performance and optimization for search engines. Using best practices is a priority for me, so I devote several hours to deepen my programming knowledge every day. I also take private courses (DK School) and study independently (Udemy, FreeCodeCamp, W3School). I do my own documentation, which I constantly update so the code is as easy as possible to read and use, both for me and for others, which is very important when working in a group.

I have work experience on 2 individual projects, the improvement and maintenance of which I am still responsible for.

Youth Society Parzival's website is my first and most difficult project that I have created. In total, I wrote the website 4 times from scratch (each version was in use). The first version was written in HTML, CSS and JavaScript, to which I later added Bootstrap. And the latest version is written using Next.js, TailwindCSS and TypeScript and uses MongoDB to store and retrieve information. The site has an admin page (authorization required) from where users (in this case Parzival members only) can add, delete and edit posts and products on the page. The main difficulty for me when writing the page was Back-end part of work, since I was completely inexperienced in this, however, I was able to learn, do and deliver the desired product to the employer within a very tight deadline.

The second project is the website of m2, a growing construction company in Krasnoyarsk, Russia, which gave me remote work experience. I'm an only developer both in Parzival and m2, so I understand the value of good communication, how important it is to get things across simply and clearly, for someone who doesn't or has some programming experience. Also, how important it is to take the initiative to start, continue or finish the work and encourage the group members to do so.

I am currently looking for a full-time job. For the first months, I will gladly agree to an internship. I would be happy to become part of a close-knit development team.

Sincerely,  
Mariam
